Darbā apkopotas ziņas par dendroloģiskajiem stādījumiem 147 Madonas rajona objektos. Pētījumi veikti no 1973. līdz 2000. gadam. Konstatēti 60 vietējie un 382 introducētie koku un krūmu taksoni – minētas to atrašanās vietas, kokiem doti izmēri.

Raksturvārdi: vietējās sugas, svešzemju sugas, koki un krūmi, Madonas rajons.

IEVADS

Madonas rajonā inventarizēti visi zināmie (izņemot Kalsnavas arborētumu) dendroloģiskie stādījumi: pilsētu un lauku (tai skaitā arī bijušie muižu, pusmuižu un mācītājmuižu) parki, apstādījumi, alejas, kā arī atsevišķas privātās kolekcijas. Galvenie pētījumi R. Cinovska vadībā veikti no 1973. gada līdz 1986. gadam. Atsevišķi objekti inventarizēti atkārtoti, daži ir apzināti vēlāk.

Pētījumi Madonas rajonā veikti no 1973. līdz 2000. gadam. Publikācijā apkopotas ziņas par 147 Madonas rajona dendroloģiskajiem objektiem (2.att.), kuros konstatēti 442 koku un krūmu taksoni (sugas, pasugas, varietātes, formas, šķirnes), t. sk. 60 vietējo un 382 introducēto koku un krūmu taksoni. Pašlaik to skaits varētu būt lielāks, jo palielinājusies Kalsnavas arborētuma loma rajona stādījumos. Šajā darbā nav iekļautas ziņas par dendroloģiski nozīmīgāko Madonas rajona objektu – Kalsnavas arborētumu, kura apsaimniekošanas plāna izstrāde (tai skaitā koku un krūmu kolekcijas inventarizācija) notiks 2005. gada vasarā. Pēc agrākiem datiem Kalsnavas arborētumā uzskaitīti 2382 koku un krūmu taksoni. Tā ir ievērojamākā zinātniski dokumentētā koku un krūmu kolekcija Austrumlatvijā un otrā lielākā Latvijā (pēc Nacionālā Botāniskā dārza Salaspilī).

Pie citiem dendroloģiski vērtīgākiem objektiem minami Bērzaunes “Iedzēni”, kur inventarizācijas laikā (1975. gadā) atradās sovhoza “Gaiziņš” dārzniecība, bet vēlāk – Ogres izmēģinājumu stacijas atbalsta punkts “Iedzēni”. Te jau kopš 1930. gada darbojušies augļkoku selekcionāri R. Āboliņš un A. Maizītis. “Iedzēnos” kopumā atzīmēti 95 introducēto koku un krūmu taksoni.

Krustkalnu rezervāta bijušajā kokaudzētavā konstatēti 47, bet Cesvaines parkā – 60 un Ļaudonas vidusskolas parkā – 52 introducēto koku un krūmu taksoni. Apzināti arī vairāki privātu kolekcionāru dārzi.

Nozīmīgākie Madonas rajona dendroloģiskie objekti apmeklēti vairākas reizes. Pildot Kultūras ministrijas pasūtījumu, rūpīga koku un krūmu taksonomiskā sastāva un dendroloģisko retumu veselības stāvokļa novērtēšana

1992. gadā veikta Cesvaines, Devēnas, Tolkas un Vestienas parkā, kā arī 1995. gadā Biksēres, Dzelzavas, Lubānas, Mārcienas un Varakļānu parkā.

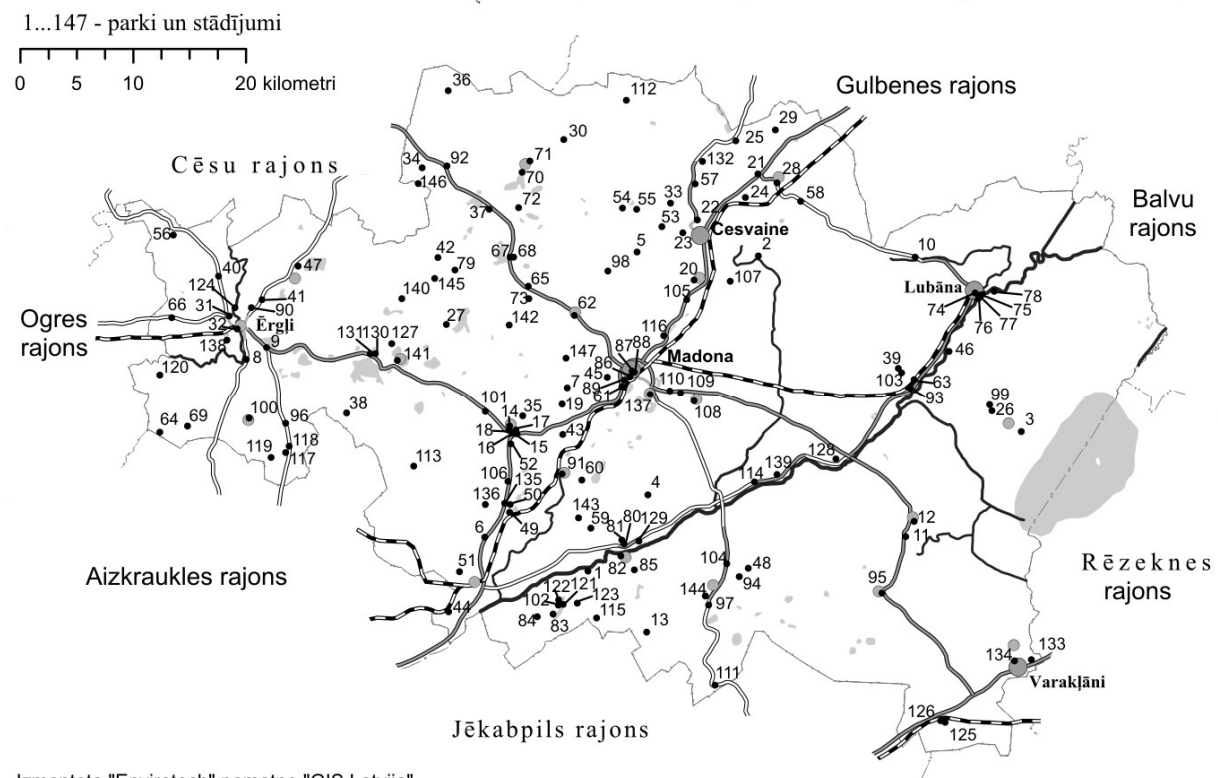

Inventarizācija dendroloģiskajos stādījumos veikta pēc vienotas Raimonda Cinovska izstrādātas metodes (R. Cinovskis u.c. 1986. *Latvijas dendroloģiskās vērtības*. Rīga, "Zinātne").

Uzskaitīti vietējie un introducētie koku un krūmu taksoni (sugas, pasugas, varietātes, formas, šķirnes). Minētas atradnes, dots koku skaits un daļai koku (introducētās sugas un dižkoki) arī izmēri: koka augstums un stumbra caurmērs (1,3 m augstumā) vai apkārtmērs (ja stumbra caurmērs lielāks par 1m).

Lietoti šādi saīsinājumi (alfabētiskā secībā): a. – aleja; apst. – apstādījumi; atv. – atvases; bij. – bijušais; cv. – šķirne; d – stumbra caurmērs krūšaugstumā (cm); $d_{0,8}$ – stumbra caurmērs citā (šai gadījumā 0,8 m) augstumā; d_{max} – resnāka koka stumbra caurmērs (cm) koku grupā; dendr. – dendroloģisks; dzīvž. – dzīvžogs; fragm. – fragments; gr. – koku vai krūmu grupa; h – koka augstums (m); kv. – meža kvartāls; m. - māja; m.m. – mācītājmāja (mācītājmuiža); n – koku skaits, ja koku ir daudz (vairāk par 50), bet precīzs skaits nav zināms; nog. – meža nogabals; p – stumbra apkārtmērs (cm); p. – parks; pag. – pagasts; stād. – stādījumi.

Šajā publikācijā dots rajonā inventarizēto stādījumu alfabētiskais rādītājs (tajā ir ziņas par stādījumu raksturu, vietējo un introducēto taksonu skaitu objektā (izcelti), inventarizācijas datumu) un taksonu saraksts.

Taksonu sarakstā aiz latīniskā nosaukuma ir latviskais nosaukums (sugām, pasugām un dažkārt arī šķirnēm). Pasvītrotie skaitļi ir kārtas numuri stādījumu alfabētiskajā rādītājā. Iekavās dots koku skaits, caurmērs (ja kokam ir vairāki stumbri, caurmērs rakstīts šādi: 12/15/20) un augstums, kā arī dažādas piezīmes. Atšķirībā no iepriekšējām sērijas publikācijām, ir dažas izmaiņas taksonu autoru rakstībā atbilstoši pasaulē pieņemtai rakstībai ("*Authors of Plant Names*", 1992, Kew).
